The AI prompts that were used to complete this project were prompts to help me create a visual of the data to see what I am working on. I typed into Gemini “Give me a code that will visualize the data for me” and the output was what you see on the vs code with the 4 graphs to really see what the data was showing me. Throughout the project i used it as well to see what i had done wrong with certain codes and helped me fix the errors made. Ai was also used to help clarify questions I had while completing the project.
